Document Imaging

Instant, multiple-user access to digitized images

recallTM

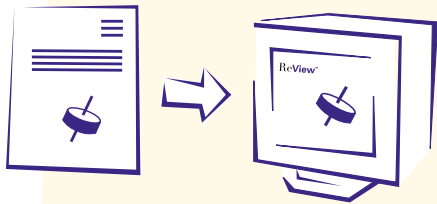

TOTAL INFORMATION MANAGEMENT

As part of Recall's family
of Integrated Document

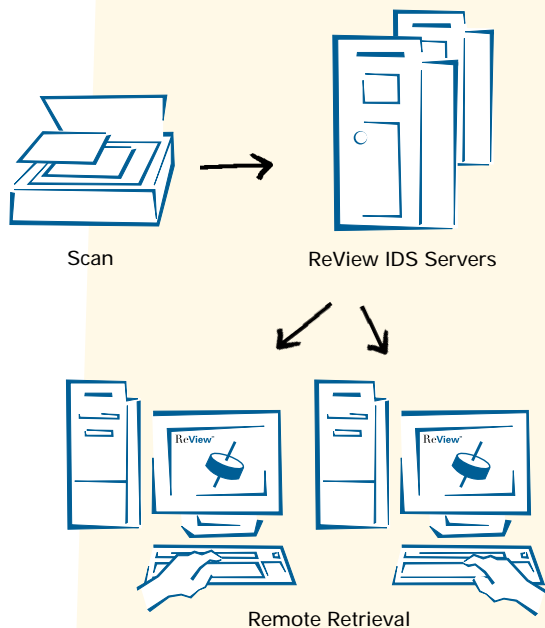

Solutions, ReView Document Imaging enables multiple users to quickly access and instantly retrieve digital documents for desktop viewing. ReView significantly increases user productivity by eliminating time-consuming searches for paper documents. Mission-critical information is right at your fingertips.

Document Imaging

Instant, multiple-user access to digitized images

ReView Document Imaging is ideal for organizations that need to have large numbers of documents digitally stored and indexed for frequent, instant retrieval. Capabilities for scanning, indexing, storage and retrieval are integrated into a single, easy-to-use solution. Original documents can then be securely stored in a Recall Information Center, or securely destroyed with Recall's Secure Destruction Services.

Enabling efficient, widespread distribution of critical files

ReView Document Imaging scans, indexes and stores documents as digital images, allowing large volumes of information to be easily retrieved for desktop viewing. By speeding up access to mission-critical documents, the solution improves efficiency and work flow within typical business applications such as: customer service (enabling first-call resolution by customer service representatives); claims processing; instant proof of delivery; and collections.

Streamlining business processes while cutting costs

By the innovative ways it stores and utilizes documents, ReView offers unique advantages to users. Critical data items can be extracted from digitized records and fed to legacy systems for billing, tracking and credit control. As a result, paper-handling and data-entry costs are reduced. The solution is TWAIN and KofaxTM compliant, and can import documents from other scanning technology. To accommodate various types of originals among departments, ReView easily allows different scanning formats. Bar code recognition makes it simple to identify batches of images. In addition, ReView includes automatic functionality that makes quick, easy work of indexing.

Instant usefulness, delivered right to your desktop

Thanks to ReView, important information can be delivered to you in an instantly usable format. You can easily access your data via the web and our ReQuestSM document/data management system — anywhere, any time. This capability allows for immediate viewing and annotation onscreen. You can then print, fax or e-mail the information directly from your desktop.
